Kimbo L1 (network) on  
Avalanche.

# THE EVOLUTION OF \$KIMBO: BEYOND THE MEME

**In the span of just months, \$KIMBO has experienced significant evolution. A pixelated character named \$KIMBO has grown into a fully hand-crafted figure brought to life through high-quality meme video content that went viral.**

Beyond just aesthetics, \$KIMBO has achieved numerous milestones: new exchange listings, the MemeRush campaign, airdrops, giveaways, impressive trading volumes, merchandise drops, major partnerships, a growing number of holders, and global recognition. These achievements demonstrate that \$KIMBO has truly made an impact, and now, the project is ready to take on even bigger challenges.

# A MEMECOIN THAT IS MORE THAN JUST VALUE EXCHANGE

**Kimbo is launching its own EVM\* Avalanche L1 blockchain, making it different from other meme tokens like \$DOGE, \$SHIB, and \$PEPE, which mostly focus on value exchange.**

\$KIMBO will be the native gas token on Kimbo L1, aiming to create a more functional and scalable ecosystem for developers and users. This strategy sets \$KIMBO apart as a leader in the meme coin space, offering more than just speculative value—a continuously evolving ecosystem.

\*The Ethereum Virtual Machine (EVM) is a decentralized computation engine that executes smart contracts on the Ethereum network. EVM is not exclusive to Ethereum; it is also used by other blockchains like Polygon, Arbitrum, and Avalanche.

## PROBLEM

Most meme coins fail because they only serve as tokens for trading and don't have any real purpose on EVM blockchains beyond being collectibles or community symbols.

## SOLUTION

Kimbo L1 sets \$KIMBO apart from ordinary meme coins by offering a platform with real use cases, including DeFi, real-world assets (RWA), and gaming.

# LET'S PLAY, ENGAGE & CONNECT.

Kimbo L1 is set to become a space for innovative projects, including NFTs, decentralized exchanges, and Web3 games. It's a welcoming environment for anyone with big ideas.

## INTRO

What started as a simple meme coin, \$KIMBO has transformed into a vibrant, community-powered project with more than 20,000 dedicated holders. Supported by the Avax Foundation, \$KIMBO has become much more than just another cryptocurrency. It's a cultural movement driven by innovation, creativity, and a passionate community known as the Kimbros.

## L1'S

The concept of "L1's" (former "subnets"), is a unique feature Avalanche offers which allows projects to run their own chain with its own gas token and rules on the Avalanche network.

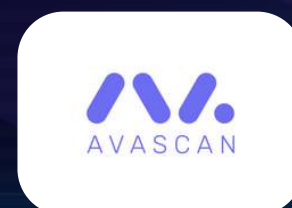

Avalanche decided to rebrand their subnets to "L1's", and we fully agree as this term captures the essence of subnets being independent networks with their own rules and gas token.

## KIMBO L1

As the official network of \$KIMBO, we are set to reshape the blockchain world with our new L1 network called "Kimbo L1". This space is designed for creators, developers, and dreamers who love being part of a dynamic community.

It is the perfect environment for projects, from NFTs to decentralized exchanges and web3 games.

## OFFICIAL PARTNERS

\*\*\*\*\*

**BUILDING TOGETHER  
ON AVALANCHE**

## SPECS

A major focus is our upcoming mainnet, which will enable the development of exciting utilities, games, and other engaging activities for the community.

The exciting part? \$KIMBO will serve as the gas token within this ecosystem.

### SMART CONTRACTS

Kimbo L1 is an EVM chain, supporting Solidity smart contracts and standard Ethereum APIs.

Anyone is allowed to deploy smart contracts and perform transactions.

### SECURITY

To maintain the ability to perform future upgrades and have the flexibility to update according to our needs the chain configuration is changeable. The Chain admin is the Kimbo multisig wallet.

### BRIDGE

Kimbo's L1 uses the revolutionary "Avalanche Warp Messaging" to bridge assets from and to C-Chain. The fee structure is 20 bips (0.2%) transaction fees per transfer.

### BECOME A VALIDATOR

Validators are currently required to run their own hardware. Operators will be able to use the Ash Console to run their nodes on their cloud accounts (AWS/GCP/Azure).

### VALIDATOR REQUIREMENTS

- Native staking: 2,000 AVAX
- GoGoPool: min 1,000 AVAX + 100 AVAX in GGP
- Benqi Ignite (PAYG): 0 AVAX + 3.3-4 AVAX per week
- Benqi Ignite (Stake): min 500 AVAX + 150 AVAX in Q1

# TRACK RECORD & ANALYTICS

We are proud of what we have achieved so far. Our reach is expanding, and more and more people are joining our community. The holders are growing, and we are excited to see this positive trend continue.

\*\*\*\*\*  
WE ARE PROUD OF OUR ACHIEVEMENTS

## TOKEN / NFT HOLDERS

- 20,000+ \$KIMBO token holders
- 1,000+ NFT holders

## WEBSITE / SOCIALS

- 120,000+ Unique Visitors (180 days)
- 21,000+ X / Twitter
- 10,000+ Telegram / IG / TikTok / The Arena)

\*As of August 2024

## BACKED BY THE AVAX FOUNDATION

The Avax Foundation's backing through the Culture Catalyst Fund highlights the importance of \$KIMBO within the Avalanche ecosystem. This isn't just about financial support, it is a recognition of the cultural impact \$KIMBO is making.

## MILESTONES (V1)

**The goal is clear: to increase the number of holders, extend reach, and establish \$KIMBO as a leading force in the crypto space, all while ensuring the community has fun along the way.**

Before we launch our mainnet, we need to address a few technical challenges and complete some essential steps. Our tech team is hard at work auditing the bridging smart contracts and other key components to ensure everything is secure and ready. We're also integrating ACP-77, a crucial update that will enhance our network's capabilities. This update will support secure decentralization, and validators will need to stake \$KIMBO to join the network.

The launch of Kimbo L1 is strategically timed to ensure that multiple exciting projects, games, and utilities are ready to go live simultaneously. This approach will provide users with a diverse range of applications to explore right from the start. Kimbo L1 is on track to become a thriving hub of innovation within the Avalanche network.
